- Manufacturing high quality products with the best raw materials (from merck and FDA approved sources) to assure patients treatment.
- Promotion of pharmaceutical industry in southern region of Iran.
- Supporting local and country demands for different medicines as required for organ transplantation.
- Manufacturing pharmaceutical prefilled syringes.
- Reducing costs in incurable diseases.
- Improving society health by producing medicines needed in the country.
- Research and developing new drug formulations.
- Increasing job occupation.

Dr. Gholamreza Dehghanzadeh as the Manager of Pars Buali company:

Graduated with Pharmacy Doctorate with more than 30 years experience of management in various government and private positions, active more than 20 years in the field of import and distribution of pharmaceutical products in Fars Province, Iran.

Brand Name: Prostovision - PBA[®]

Generic Name: Bimatoprost 0.03%

Dosage Form: Sterile Eye Drops

Classification: Prostaglandins

Indications: Bimatoprost 0.03% is the only FDA approved treatment for hypotrichosis of eyelashes. It can be used for treatment of eyebrow hypotrichosis, too. The medicine increases eyebrow and eyelash growth, makes them longer, thicker and darker.

Brand Name: Optotim - PBA[®]

Generic Name: Timolol 0.5%

Dosage Form: Sterile Eye Drops

Classification: Beta-blockers

Indications: Optotim-PBA[®] is used to treat raised pressure in eye(s) including open-angle glaucoma and ocular hypertension.

Brand Name: Trusovision - PBA[®]

Generic Name: Dorzolamide 2%

Dosage Form: Sterile Eye Drops

Classification: Carbonic Anhydrase Inhibitors

Indications: It is indicated in the treatment of elevated intra-ocular pressure in conditions such as ocular hypertension and glaucoma (open-angle glaucoma, pseudo-exfoliative glaucoma). Dorzolamide eye drops can be used alone or in addition to other reducing eye pressure medicines (beta-blockers).

Brand Name: Dorzomol - PBA[®]

Generic Name: Dorzolamide / Timolol

Dosage Form: Sterile Eye Drops

Classification: Carbonic anhydrase inhibitors (Dorzolamide) / beta blockers (Timolol)

Indications: Dorzomol-PBA[®] is prescribed in the treatment of ocular hypertension and open-angle glaucoma.

Brand Name: Alfavision - PBA[®]

Generic Name: Brimonidine tartrate 0.2%

Dosage Form: Sterile Eye Drops

Classification: alpha-2 adrenergic receptor agonists

Indications: It is used in the treatment of open-angle glaucoma or ocular hypertension.

Brand Name: Xalavision- PBA[®]

Generic Name: latanoprost 0.005%

Dosage Form: Sterile Eye Drops

Classification: Prostaglandin analogues

Indications: Xalavision-PBA[®] is indicated for the reduction of elevated intraocular pressure in patients with open-angle glaucoma and ocular hypertension.

Brand Name: Patavision - PBA[®]

Generic Name: Olopatadine 0.1%

Dosage Form: Sterile Eye Drops

Classification: Mast cell stabilizers

Indications: Patavision-PBA[®] is used for the treatment of signs and symptoms of seasonal allergic conjunctivitis (itching, redness as well as swelling of the surface of the eye).

Brand Name: Levovision- PBA[®]

Generic Name: Levofloxacin 0.5%

Dosage Form: Sterile Eye Drops

Classification: Antibiotics, Fluoroquinolones

Indications: Levofloxacin (active ingredient) is an antibiotic of the type called Fluoroquinolones that is used to treat corneal and conjunctival bacterial infections.

Brand Name: Polylubran - PBA[®]

Active Ingredient: Polyvinyl alcohol 1.4%

Dosage Form: Sterile Eye Drops

Classification: Artificial Tears

Indications: Polylubran - PBA[®] eye drops solution is a substitute for tears and contains the active ingredient Polyvinyl alcohol which acts as a lubricant to treat symptoms of dry eye (such as soreness, burning, irritation or dryness) caused by your eyes not producing enough tears due to old age, environmental effects (wind, sun, dry air, smoke, excessive light, air conditioning, heating), prolonged use of computer. Polylubran - PBA[®] will help keep your eyes comfortable.

Brand Name: Tearvision - PBA[®]

Active Ingredient: Hypromellose 0.32%

Dosage Form: Sterile Eye Drops

Classification: Artificial Tears

Indications: Tearvision - PBA[®] eye drops solution is a substitute for tears which acts as a lubricant to treat symptoms of dry eye (such as soreness, burning, irritation or dryness) caused by your eyes not producing enough tears due to old age, environmental effects (wind, sun, dry air, smoke, excessive light, air conditioning, heating), prolonged use of computer. Tearvision - PBA[®] will help keep your eyes comfortable.

Brand Name: Betavision- PBA[®]

Generic Name: Betamethasone 0.1%

Dosage Form: Sterile Eye, Otic, Nasal Drops

Classification: Corticosteroids

Indications: Betamethasone is used to treat inflammation (redness, swelling, itching) of the eyes, nose and ears.

Brand Name: Metholovision - PBA[®]

Generic Name: Fluorometholone 0.1%

Dosage Form: Sterile Eye Drops, Suspension

Classification: Corticosteroids

Indications: Fluorometholone is used to relieve inflammation of the eye.

Brand Name: Prostovision - PBA[®]

Generic Name: Bimatoprost 0.01 %

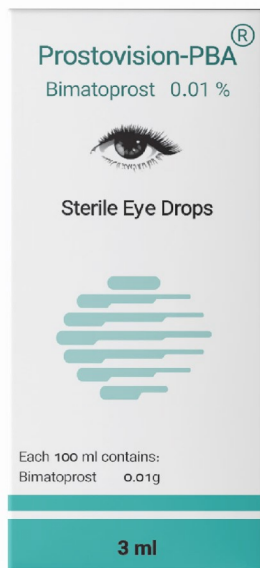

Dosage Form: Sterile Eye Drops

Classification: Prostaglandins

Indications: Prostovision-PBA[®] 0.01% is an antiglaucoma preparation. The recommended dose is one drop in the evening, once daily in each eye that needs treatment.

The ideal drug for treatment of glaucoma should have the following characteristics: (1) effectively lower IOP, (2) no adverse effects or systemic exacerbation of disease, and (3) inexpensive with once-a-day dosing.

Based on studies, prostaglandins are more efficacious in lowering IOP than beta-blockers, alpha agonists, or carbonic anhydrase inhibitors. Bimatoprost, latanoprost, and travoprost are among the most efficacious drugs, although the within class differences were small and may not be clinically meaningful.

Preservatives in multidose formulations of topical ophthalmic medications are crucial for maintaining sterility but can be toxic to the ocular surface. Benzalkonium chloride (BAK)—used in approximately 70% of ophthalmic formulations—is well known to cause cytotoxic damage to conjunctival and corneal epithelial cells, resulting in signs and symptoms of ocular surface disease. These adverse effects are more problematic with chronic exposure, as in lifetime therapy for glaucoma, or long term use of artificial tears, but can also manifest after exposure as brief as seven days.

Due to the adverse effects of preservatives on users, salamatsazan parsbuali focused on preservative free formulations. Multi-dose dispensing devices will be a cost-effective alternate to manage the life-cycle of preservative-free ophthalmic formulations rather than single use vials that could incur high productivity cost.

Brand Name: Dorzomol - PBA[®]

Generic Name: Dorzolamide/Timolol

Dosage Form: Sterile Eye Drops 10 ml

Preservative Free

Classification: Carbonic anhydrase inhibitors

(Dorzolamide)/Beta-blockers (Timolol)

Indications: It is prescribed in treatment of ocular hypertension and glaucoma. This product is Preservative Free, therefore it is suitable for sensitive eyes and you can use it with contact lenses in your eyes.

Brand Name: Lacrivation - PBA[®] Plus

Active Ingredient: Sodium Hyaluronate 0.25%

Dosage Form: Sterile Eye Drops 10 ml

Preservative Free

Classification: Artificial Tears

Indications: Lacrivation - PBA[®] PLUS eye drops solution is a substitute for tears to treat symptoms of dry eye (such as soreness, burning, irritation or dryness) caused by your eyes not producing enough tears due to old age, environmental effects (wind, sun, dry air, smoke, excessive light, air conditioning, heating), prolonged use of computer or ocular surgery, conjunctivitis, contact lens use. Lacrivation - PBA[®] Plus eye drops moisten, soothe and lubricate the surface of your eye, help keep your eyes comfortable, support the healing of superficial lesions of the cornea and prevent corneal damage.

This product is preservative free, therefore it is suitable for sensitive eyes and can be used with contact lenses in your eyes.
